MSci Wild Animal Biology Programme Specification Applies to cohort commencing 2017

2. Teaching institutionThe Royal Veterinary College and Institute of Zoology (IoZ, Zoological Society of London)3. Programme accredited byRoyal Society of Biology4. Final awardMaster in Science5. Programme TitleWild Animal Biology6. Date of First Intake20157. Frequency of IntakeAnnually in September
3. Programme accredited byRoyal Society of Biology4. Final awardMaster in Science5. Programme TitleWild Animal Biology6. Date of First Intake20157. Frequency of IntakeAnnually in September
4. Final awardMaster in Science5. Programme TitleWild Animal Biology6. Date of First Intake20157. Frequency of IntakeAnnually in September
5. Programme TitleWild Animal Biology6. Date of First Intake20157. Frequency of IntakeAnnually in September
6. Date of First Intake20157. Frequency of IntakeAnnually in September
7. Frequency of Intake Annually in September
8. Duration and Mode(s) of Study Four years full-time
9. Timing of Examination Board meetings Annually in July
10. Date of Last Periodic Review N/A
11. Date of Next Periodic Review 2019/20
12. Entry Requirements Three A2 subjects including Chemistry or Biology/Human Biology. General studies is not accepted as a third subject. Where an applicant is taking Biology/Humar Biology/Chemistry AND another science subject (Human Biology, Biology, Chemistry Physics or Mathematics), they will receive an offer of BBB. Where an applicant is taking Human Biology/Biology/Chemistry and two other non-science subjects, they will receive an offer of ABB including an A in the science subject they are taking. Other courses that will be accepted include; • Access to HE Diploma. • BTEC National Diploma in Animal Management. • Cambridge Pre-U. • International Baccalaureate Certificate. • Scottish Qualifications. • Welsh Baccalaureate. • Irish Leaving Certificate. • UCL University Preparatory certificate for Science & Engineering (UPCSE) for International Students. And GCSEs at grade B in English, Mathematics (in not studied at A-Level) and Double Science (o in two individual science subjects, if taken separately.

To be considered for progression to Year 4, applicatis must have achieved an aggregate Year 2 mark of at least 65% with 62% in the project report, and at least 55% in Year 3. 13. UCAS code C300 14. JACS Code C300 15. Relevant QAA subject benchmark group(s) Not applicable 16.  The Educational Aims of the taught modules of Year 4: Conservation Biology: examine the models we can use to assess population viability, gain an understanding of the allocation of scarce resources for conservation The Impact of Disease on Populations: a critical review of epidemiology and the population biology of infectious agents Health and Welfare of Captive Wild Animals: a critical understanding of the principles of animal management and preventive medical approaches to maintain healthy populations and enhance their welfare 	 produce graduates equipped to play a leading role in conservation as researchers, epidemiologists, academics and senior management in in-situ conservation programmes, national parks, zoological collections, universities and government departments worldwide produce high-calibre graduates who can proceed to study for higher research degrees The specific aims of the MSci Year are to enable students to: gain research experience within the field of wild animal biology gain a deep and systematic understanding of current questions, problems and methods employed within the selected specialised research topic implement principles of project and experimental design and carefully execute, record and clearly disseminate research use self-reflection to improve levels of knowledge, professionalism, personal skills and research skills develop a sound appreciation of the research environment in which the student is working and their role within it 		
 Conservation Biology: examine the models we can use to assess population viability, gain an understanding of the allocation of scarce resources for conservation The Impact of Disease on Populations: a critical review of epidemiology and the population biology of infectious agents Health and Welfare of Captive Wild Animals: a critical understanding of the principles of animal management and preventive medical approaches to maintain healthy populations and enhance their welfare 	The Educational Aims of the taught modules of Year 4:		
 The Impact of Disease on Populations: a critical review of epidemiology and the population biology of infectious agents Health and Welfare of Captive Wild Animals: a critical understanding of the principles of animal management and preventive medical approaches to maintain healthy populations and enhance their welfare. 	Conservation Biology: - examine the models we can use to assess population viability, - gain an understanding of the allocation of scarce resources for conservation		
Health and Welfare of Captive Wild Animals: - a critical understanding of the principles of animal management and preventive medical approaches to maintain healthy populations and enhance their welfare	- a critical review of epidemiology and the population biology of infectious agents		

Interventions:

- to review intervention methods

Detection, Surveillance and Emerging Diseases:

- to review the complex methodology required to detect and monitor changes in endemic diseases, to detect emerging diseases and interpret the findings in a scientific manner

Ecosystem Health:

- to review the impact of anthropogenic stressors on the ecosystem and how ecosystem health can be measured

Evaluation of the Health and Welfare of Captive Wild Animals:

- to investigate the scientific evaluation of wild animal welfare

- critically analyse the keeping of wild animal in captivity

18. Programme outcomes - the programme offers opportunities for students to achieve and demonstrate the following learning outcomes.

A. Knowledge and understanding of:

- the biological principles underpinning wildlife disease and conservation studies
- field, conservation and pathological techniques in wild animals
- conservation biology including population ecology
- epidemiology, diagnosis, pathology and control of wildlife disease, the ecology of infectious agents in wild animal populations and veterinary interventions in wildlife (including social, welfare, ethical and legal aspects)
- management and sustainable utilisation of captive and free-living wild animals (including husbandry, breeding and nutrition), and the preventive medicine of captive and free-living wild animals
- wildlife research methodology

B. Cognitive (thinking) skills:

- Planning
- Logic and reasoning
- Comprehension
- Visual and auditory processing
- Long-term memory

C. Practical skills:

- Basic competence in management techniques for wild animals
- Scientific skills, including critical review of the scientific literature, and design, execution and analysis of laboratory or field studies

D. Key skills:

- communication skills
- group work skills
- personal skills
- interpersonal skills
- organisational skills
- teaching and training skills
- learning skills
- · information gathering and analytical skills
- problem solving skills
- language skills
- information technology skills
- entrepreneurial skills

Teaching/learning methods

Students develop their knowledge and understanding through attendance at lectures, seminars, workshops, tutorials and through a variety of directed and self-directed learning activities, including practical exercises and self-assessment tools. They will learn cognitive skills through problem solving, case studies, reflection and role modelling. Practical skills will be learned through demonstration, observation, prosecution, feedback, role modelling and experimentation. Key Skills will be taught through group work and exercises, structured learning, practical work, reflection, presentations (oral and written) and problem-solving exercises.

During the fourth year teaching is divided into didactic modules (four x 15 credits) and a research module (75 credits). The research module will involve the design and completion of a research project. Outcomes will include a scientific paper prepared for publication and presentation at a specified conference.

During Year 4 an extended project is carried out under the supervision of a Supervisor. Training will be given to the student as appropriate by the supervisor and other work colleagues, with regular meetings with the supervisor.

Assessment

A. Knowledge and understanding:

Students will be assessed through a combination of formative, in-course and summative examinations, using a range of question formats.

B. Cognitive (thinking) skills:

Cognitive skills will be assessed through appropriately structured written examinations, together with project reports and discussion of poster presentations.

C. Practical skills:

Practical skills will be assessed using structured tasks and experimental projects.

D. Key Skills:

Through key skills assessment criteria, alongside systems and discipline-based assessment criteria, these skills will be assessed in a variety of ways throughout the course.

E. Research Skills:

Research skills are assessed in all years through written and oral presentation of a literaturebased project and three experimental projects, with supervisor assessments for experimental projects. Formative assessment of the project during Year 4 (MSci Research Year) will be via participation in lab meetings, journal clubs, supervisory meetings and tutorials; self-assessment of skills. Summative assessment will be assessment of a Project Report, poster presentation, an oral examination and a Supervisor's assessment. Assessment of the Research Skills module is via a Research Proposal, with presentation at two journal clubs being required.

19. Programme structures and requirements, levels, modules, credits and awards

This is a modular programme: See Award and Assessment Regulations Part 2 "Award Map" for the Course for details.

20. Work Placement Requirements	Optional Certificate in Work-based Learning
	and Research placement year
