

Applied Animal Welfare

15 credit standalone module, or part of MSc Intensive Livestock Health & Production

The content of this module enables students to develop knowledge and understanding in animal welfare using a case-based problem solving approach. This module focuses on the welfare of intensively reared animal species (pigs and poultry). Each aspect of animal welfare covered will be considered at all stages of production from on farm, during transport, at markets and at abattoirs.

Part-time, Online, Interactive, Distance Learning

Learn while you earn
and study from your
home or workplace
at times that are
convenient to you

Delivery and assessment:

Delivery is via part-time, online distance learning over 11 weeks. Students are expected to commit approximately 12 hours per week during the delivery of the module. Module assessments range from; in course assignments, critical review of papers and exams. Where necessary exams may be taken at an alternative, convenient location.

Starting 12th June 2017

Benefits -

this module will enable you to:

- Enhance your knowledge and understanding of animal welfare;
- Apply knowledge of animal welfare in real life situations;
- Understand animal welfare legislation at the levels of production, transport, sale and slaughter;
- Identify poor welfare at all levels of the chain and make appropriate recommendations;
- Understand roles and responsibilities of individuals and organisations involved in impacting animal welfare at all levels of the chain.
