BSc Biological Sciences Programme Specification Applies to Cohort Commencing 2014

1. Awarding institution	The Royal Veterinary College	
2. Teaching institution	The Royal Veterinary College (University of London)	
3. Programme accredited by	N/A	
4. Final award	Bachelor of Science	
5. Programme Title	Biological Sciences	
6. Date of First Intake	2014	
7. Frequency of Intake	Annually in September	
8. Duration and Mode(s) of Study	Three years full-time	
9. Timing of Examination Board meetings	Annually in July	
10. Date of Last Periodic Review	N/A	
11. Date of Next Periodic Review	2019/20	
12. Entry Requirements	Academic requirements (http://www.rvc.ac.uk/Undergraduate/BScBiove tSci/EntranceReq.cfm) Three B grades or above at Advanced- Level/A2 or equivalent. One must be Chemistry or Biology/Human Biology, plus one other Science (Chemistry, Biology/Human Biology, Physics, Maths), plus one other subject (not General Studies). Other courses that will be accepted include: • Access to HE Diploma. • BTEC National Diploma in Animal Management. • Cambridge Pre-U. • International Baccalaureate. • Scottish Qualifications. • Welsh Baccalaureate. • Irish Leaving Certificate. • UCL University Preparatory certificate for Science & Engineering (UPCSE) for International Students. And GCSEs at grade B in English, Mathematics (if not studied at A-Level) and Double Science (or in two individual science subjects, if taken separately)	
13. UCAS code	C100	
14. JACS Code	C000	

15. Relevant QAA subject benchmark group(s)

Biosciences

16. Reference points

Report of the Committee of Enquiry into Veterinary Research (the Selborne Report)

Quality Assurance Agency, The framework for higher education qualifications in England, Wales and Northern Ireland

Regulations of the University of London

Future Fit, CBI 2009

Degree Accreditation Criteria, Society of Biology

17. Educational aims of programme

- To offer a high quality course, in which students are challenged by, and stimulated to challenge, accepted wisdom in all fields of biological sciences.
- To prepare graduates for careers in academic and industrial research, biotechnology and the pharmaceutical industry in general, and in other biological, veterinary and medicine-related industries.

18. Programme outcomes - the programme offers opportunities for students to achieve and demonstrate the following learning outcomes.

At the time of graduation students should, to a standard appropriate for a new bachelor of science graduate, be able to:

- A. Demonstrate knowledge and understanding of:
- 1. Specialised terminology which underpins an individual discipline or subject area.
- 2. Cognate sciences.
- 3. The political, social and economic context of the applications of science.
- B. Display the following cognitive (thinking) skills:

The ability to:

- 1. Access information and skills as required by a task
- 2. Make methodical observations on the normal and abnormal functioning of biological systems
- 3. Discriminate between important and relatively unimportant information and observations
- 4. Reflect on information and observations, and solve problems
- 5. Discuss uncertainty in relation to scientific "facts", and balance different schools of thought.
- C. Display the following practical skills including the ability to:
- 1. Design and execute experiments, and to analyse and interpret the resultant data.
- 2. Present conclusions in a variety of formats.
- D. The following are considered to be Key skills:
- 1. Communication.
- 2. Teamwork.
- 3. Personal management and career development.
- 4. Effective learning.
- 5. Problem-solving.
- 6. Information technology.
- 7. Numeracy.
- 8. Acting with integrity, being honest, fair and compassionate in all your work.
- 9. Maintaining high ethical principles in relation to business dealings, the use of information and experimentation in man and animals.

Teaching/learning methods

Students develop their knowledge and understanding through attendance at lectures, seminars, workshops, tutorials and through a variety of directed and self-directed learning activities, including practical exercises. They will learn cognitive skills through problem solving, case studies, reflection and role modelling. Practical skills will be learned through demonstration, observation, prosecution, feedback, role modelling and experimentation. Finally, Key Skills will be taught through group work and exercises, structured learning, practical work, reflection, presentations (oral and written) and problem-solving exercises.

Assessment

A. Knowledge and understanding:

Students will be assessed through a combination of formative, in-course and summative examinations, using a range of guestion formats.

B. Cognitive (thinking) skills:

Cognitive skills will be assessed through appropriately structured written examinations, together with project reports and discussion of poster presentations.

C. Practical skills:

Practical skills will be assessed using structured tasks and laboratory-based projects.

D. Key Skills:

Through key skills assessment criteria, alongside systems and discipline-based assessment criteria, these skills will be assessed in a variety of ways throughout the course.

19. Programme structures and requirements, levels, modules, credits and awards

The Biological Sciences degree is a linear, non-modular programme in its first two years. In the Third Year, each student follows a programme of modules and course units from those offered by the RVC and/or other institutions.

Year One is valued at 120 credits at Level 4; Year Two, 120 credits at Level 5; and Year Three, 120 credits at Level 6.

Year 1	Year 2	Year 3
The core course will comprise: Essential Biomedical Sciences- The Moving Animal, The Living Cell, Inheritance; Reproduction & Development, Basic Concept in Immunology Systems & Investigative Biology Problem Definition and Investigation	The core course will comprise: The Enemy Within The Enemy Without Principles of Pharmacology Research Project The option of one of: Imaging of Disease or Applied Pharmacology	Hypothesis driven research project involving data analysis and interpretation Optional modules

The generic theme will continue throughout the first two years and will comprise:

- finding and using information
- what makes a professional scientist?
- epistemology
- scientific method
- statistics
- data recording
- basic epidemiology
- experimental design
- risk
- analytical tools
- ethics

- communication skills
- leadership
- team building and function business and financial management
- patent law

20. Work Placement Requirements

N/A
