COMMON GRADING SCHEME (CertAVP)

This follows the RVC’s common grading scheme as amended in October 2014. Markers should use the clinical descriptors for case reports, the reflective scheme for A-module answers and the general long-answer scheme for all other long answers. The descriptors in the reflective scheme should be considered as an extra aid to marking in addition to the normal long-answer scheme.

This is the marking scheme for individual pieces of work and not the overall module classification scheme. The latter is calculated through the aggregation of marks from the full range of assessments undertaken by a candidate.

Each mark has a short descriptor and a full definition of what is to be expected of an answer that is assigned that mark. Only those percentages that appear with descriptors in the marking scheme are to be used; percentages that fall between these must not be used.

In writing examination questions and key-word answers, question-setters must provide a brief explanation of the philosophy behind their question and what they are expecting in the answer. Generic approaches of this sort will be more important in assessing understanding of concepts rather than facts and it will also enable credit to be given for ‘reading around’.

In giving guidance to students on how to answer questions, guidance with respect to allocation of time spent answering sections of the question, rather than marks for individual sections, will be of more value to the student writing an answer, and staff setting questions are recommended to adopt this approach.

Providing all other descriptors for a particular mark have been satisfied, the absence of evidence of wider reading (beyond course work materials) in long answers written under examination conditions should not prevent that mark from being awarded. The descriptors indicate how marks should be allocated according to the standard of a piece of work in three different categories; “selection and coverage of material”, “understanding” and “structure, clarity and presentation”. If the marks in the three different categories are not the same, the median of the three categorical marks should be allocated as the overall mark for the piece of work. This will ensure that the mark is a synthesis of the different aspects of the work and appears on the 17-point scale. Where an answer comprises entirely or almost entirely incorrect information, no credit will be given for Structure, Clarity and Presentation.
