Does life expectancy (years) differ between dog breeds?

**CONCLUSIONS:**

1. **Dog life tables** can help owners to better understand the typical remaining life expectancies for their dog from different ages.
2. **Some popular flat-faced** (brachycephalic) breeds have worryingly low life expectancy at age 0. This may be associated with poor overall health. Owners are encouraged to "stop and think before buying a flat-faced dog."
3. **Life expectancy varies widely** between breeds. Jack Russell Terrier and Yorkshire Terrier have the highest life expectancy.

Teng et al. (2022) "Life tables of annual life expectancy and mortality for companion dogs in the United Kingdom". Scientific Reports.

Life tables show life expectancy from a range of specified ages in a given population. Life tables can promote improved understanding of general health: when comparing two populations at the same age, lower life expectancy in one group may imply generally lower health.

This VetCompass study explored data from randomly selected deaths in dogs under veterinary care in the UK during 2016.

CONCLUSIONS:

- Life expectancy (years) differ between dog breeds.
- Dog life tables can help owners to better understand the typical remaining life expectancies for their dog from different ages.
- Some popular flat-faced (brachycephalic) breeds have worryingly low life expectancy at age 0. This may be associated with poor overall health. Owners are encouraged to "stop and think before buying a flat-faced dog."
- Life expectancy varies widely between breeds. Jack Russell Terrier and Yorkshire Terrier have the highest life expectancy.

**Remaining life expectancy by age of dog**

- Female dogs (11.4 years) had longer life expectancy than male dogs (11.1 years).
