

**Final year veterinary student starts consultation**

- > Collects you and your pet from waiting room
- > Takes a full history
- > Performs clinical examination

**Student leaves consultation to discuss case with an experienced, qualified or specialist vet**

- > Student relays information to vet, suggests possible investigations or treatment
- > This is essential learning and reflection time for veterinary students

**Vet and student return to the consultation**

- > Vet may ask further questions and examine your pet
- > Vet fully explains options for investigation and treatment of your pet's condition, including risks and complications of any procedure
- > Students gain vital learning by observing vet

**At the end of the consultation your pet may be admitted to the hospital and you go home****Your pet's case is discussed further, after the consultation:**

- > With an experienced, qualified vet or specialist vet
- > As needed with other specialist veterinary teams within the hospital so that your pet can benefit from the advice of all the veterinary experts in their field
- > Allows further analysis and consideration of your pet's case, refining and optimising the plan
- > This is essential learning time for students and the whole specialist led team of vets and nurses as we are constantly learning from each other

**What this means for you and your pet:**

- > Every patient benefits from multiple sets of veterinary eyes.
- > Your pet receives the benefit of some of the profession's most experienced vets, some of whom are internationally recognised leaders in their specialist field.
- > Your pet receives the care and enthusiasm of our talented next generation of vets and specialist vets, by helping others to learn we offer first class care to your pet.
- > The consultation process takes into account the presenting condition of your pet so emergency care is rapid and prioritised.
